Fundamental Objects
The Mobile Tools

Handheld Auditing Software

foAudits (Fundamental Objects Audits) is a handheld auditing tool for home or business energy, lighting, water and solar audits.

You can create your own audits, or use one of the audits that are supplied with the package. Audit templates are first created or placed within a server database. You can enter and use your own customer list within this database. This allows you to have one person set up audits for a number of inspectors before each work day.

Once completed in the field, the mobile audits are then synced (copied) back into the server database. From there you can use the supplied reporting features, or move the captured data to another one of your systems.

Features

- Import your Customer Lists
- The following entry field types are supported:
  - Date and Times
  - Categories and Code Lists
    (*You can use your own codes!*)
  - Voice to Text
  - Sketches
  - Floor Plans
  - Labels
  - String Data (text)
  - Buttons
  - Check boxes (yes/no)
  - Radio boxes
  - Comments/Notes
  - Blank Lines
  - Customer Signoffs
